HDTV Transport stream file playback on the Magic TV MTV3600TD.

The Magic TV MTV3600TD is capable of playing back HDTV transport stream files, to convert your video files to *.m2ts format is quite simple:

Download the latest version of the SUPER file converter from:

<http://www.erightssoft.com/SUPER.html>

Install super and run it, then simply set the options as shown in the image below and drag the file you would like to convert onto the application near the bottom.

Pressing Encode (Active Files) will result in your video files being converted. This process will take some time.

Once the files have been converted copy them to a directory called video in the root of a Fat32 formatted USB2 Hard Disk Drive, plug it into one of the USB ports on the back of the Magic TV then then press Magic TV Button>Magic TV Gadgets>HD Camcorder Movie and select the file you wish to playback.
