

Installation Instructions: Installation example for SAT/TER Diplexers

A SAT/TER diplexer can be used where you wish to use the same cabling to provide both Satellite and Terrestrial signals to a location in your house.

Example : Using two SAT/TER diplexers to connect a Satellite dish and UHF aerial to a STB and a TV with integrated Freeview|HD terrestrial tuner.

The SAT/TER diplexers allow the STB to provide power to the LNB but do not allow power to be passed on the terrestrial side. If you wish to use a masthead amplifier with the UHF aerial you must put the power injector between the Masthead amplifier and the first SAT/TER diplexer.
