Installation Instructions: How configure an UltraPlus HD PVR to use Network Attached Storage (NAS).

Your UltraPlus receiver is able use Network Attached Storage, you can play media files you have saved on the NAS or use it to store recordings, if your UltraPlus has a drive you can configure it to be NAS enabling you to play the recordings saved on the drive from another UltraPlus HD PVR.

You can connect the UltraPlus to a drive on your Network this may be via a physical link (i.e. Ethernet) or WiFi as shown in the example below. The Network drive could be a NAS drive or it may simple be a drive in one of your PCs.

We recommend that you use a static IP address for the NAS or Network drive so that it does not change.

Once you have connected to the Network Drive you will see details about the amount of available space on the Drive:

Now exit and go to the Recording Option Menu and press enter:

Scroll down to the TimeShift and Record Device and set them to you Network Drive.

Recording Option	05:12 PM / 19-Mar-2010
Alarm Confirm Message	
Recording Stop Message	
Extra Recording Time Before Start	
Extra Recording Time After Finish	
TimeShift Start	
Commercial Skip	10 Sec
TimeShift Device	Network Drive
Record Device	Network Drive
Record Device	Network Drive

Now you can record to and playback from the Network drive.
